

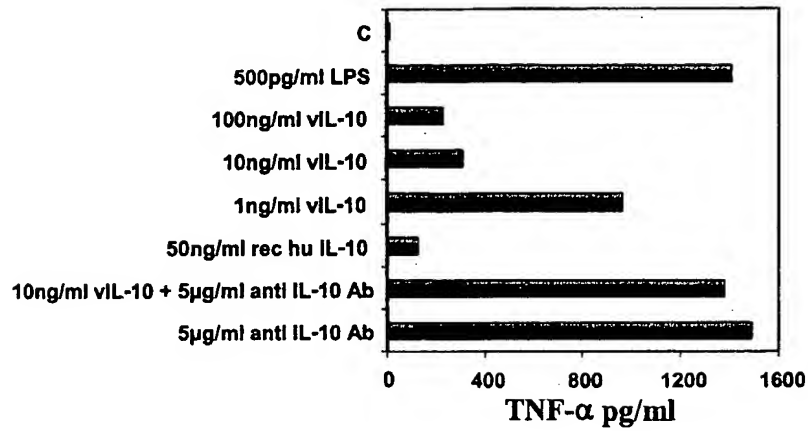

EXHIBIT 1

**Inhibition of LPS-induced production of TNF- α by vIL-10.**

PBMC were isolated and stimulated with LPS (500 pg/ml) for 4 hours together with different concentrations of vIL-10 containing supernatants, recombinant human IL-10 and monoclonal antibodies directed against IL-10. Shown is one representative experiment (n=3).

(C=control, Ab=monoclonal antibody, rec.=recombinant)
